

Secure Systems & Technologies (SST) is your one-stop solution provider, manufacturer and service partner, where data security is paramount, whether in the office or in the most demanding of environments. Whenever you have requirements for special environmental or security considerations to be met, SST can accommodate, either from its extensive range of standard products or through the provision of customised engineering solutions. With many years of experience in communications security, encryption, EMC, harsh or constrained environments and TEMPEST, SST is your partner of choice. Located in a state of the art, purpose built facility in Gloucester, England, research and development, manufacture and testing resources are combined, further improving efficiency and reducing the time between conception and deployment.

Security Enhancements: SST works closely with security product companies to ensure seamless integration of approved encryption and security capabilities into its product range. Secure memory devices, Smart Card Readers, Secure KVM Switches, Fibre Isolation Switches, disk encryption software and encrypted disk modules have been tested and proven in many customer applications.

Customised Solutions: Working closely with its customers, SST provides engineering design, development, build and test services, providing integrated systems and equipments to meet the specific requirements and stringent standards demanded by the client. From conception to deployment, SST project managers and design engineers adapt current technologies to meet the challenge of information protection.

CUSTOMISED SOLUTIONS

**SECURE PRODUCTS FOR A
MORE SECURE WORLD**

- Mobile Secure Office**
- Encryption
 - Secure Communications
 - Satellite, landline or wireless
 - Secure image and message transfer

- Rack mountable Server**
- Dual Processor
 - Serial ATA Raid
 - Dual Power Supply (alarmed)

Configurable RF Enclosures

- for:
- Secure Communication
 - Server Applications
 - Remote Secure Storage

In collaboration with its customers, SST provides engineering design, development, build and test services

- Mobile Tactical Wireless Network**
- Outdoor Wireless Applications
 - Network Security
 - Reliability and Manageability

Complete Secure Rack Solutions

- Encryption Secure KVM
- Multiple Servers
- UPS
- Secure installation

SST project managers and design engineers adapt current technologies to meet the challenge of information protection
